

Low Dose Lung Cancer Screening

Now at Spooner Health

Lung cancer is the leading cause of cancer death for both men and women. Over 150,000 people die from it every year. This is greater than the mortality rates of breast, prostate, and colon cancer combined. But Spooner Health is taking steps to change that.

Introducing low dose CT screening

Spooner Health now offers low dose computed tomography (CT) screening for lung cancer. This is a quick and easy test that helps detect lung cancer in high-risk patients. The test uses special x-ray technology to obtain images of your lungs from many different angles around your body. It results in a clearer picture of your lungs' health.

Who is this test for?

Low dose CT screening is recommended for the following groups of people and others who have been identified by their doctors as high-risk:

- People aged 55 to 77
- Have no signs or symptoms of lung cancer
- Current smokers or former smokers who have quit within the past 15 years
- Have a smoking history of 30 or more pack-years

SCHEDULE A SCREENING

If you meet the above criteria, talk to your doctor today about scheduling a low dose CT screening at Spooner Health. Call **715-939-1594** to learn more.
